

**Alban Eco Solutions** is a Maryland licensed general contractor with its fulltime focus on renovating homes to improve their energy utilization, thereby making homes more comfortable and reducing utility bills. Here's what one customer wrote:

Eliminating Air Infiltration  
Makes all the Difference

***"Just wanted to let you know what happened when we had those days in the mid/upper 90's last week. Before, our upstairs area and master BR would get to the low 80's in that kind of weather, and it was difficult to get it down in the evening. Now, with the thermostat set at 74, it got no higher than 76.5 degrees up there! We are very happy with the results. The funny part is now we don't use our ceiling fans that are in every bedroom."* Keith Herbert**

The first step is to have a residential energy auditor by one of Alban's certified energy auditors. The written report will identify areas of air infiltration and energy wasting components in the house, such as attics or appliances.

Air sealing the attic floor will stop air leaks

Renewed Attic Floor Insulation

Air Sealing Exterior Joints

Air Sealing Interior Joints
